# Angelite

BRAND GUIDELINES · V1.0 · OCTOBER 2026

Open source AI voice generation. How to use the Angelite identity.

01 · IDEA

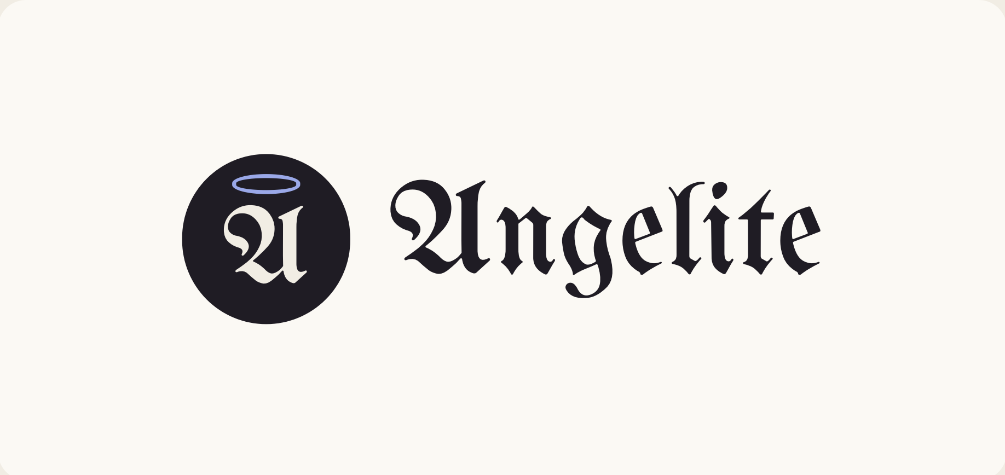
## The Codex

A codex is a bound manuscript, the form in which voices were first preserved and shared. Angelite does the same for synthetic speech: an open collection of voices anyone can read, copy, and extend.

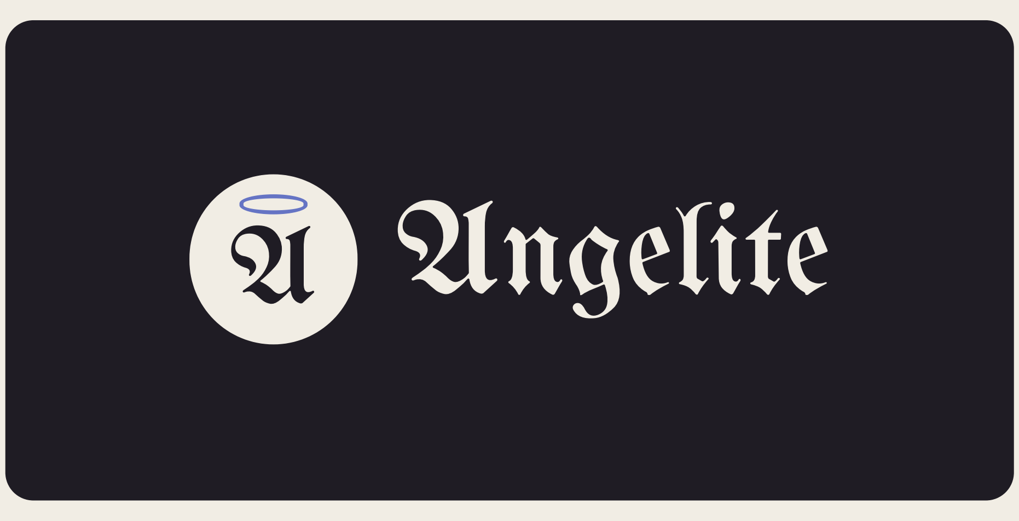
The mark pairs a blackletter **A**, drawn from the manuscript tradition, with a halo in angelite blue, the color of the stone the project is named for. The halo is the only color in the logo and always sits above the letter.

02 · LOGO SYSTEM

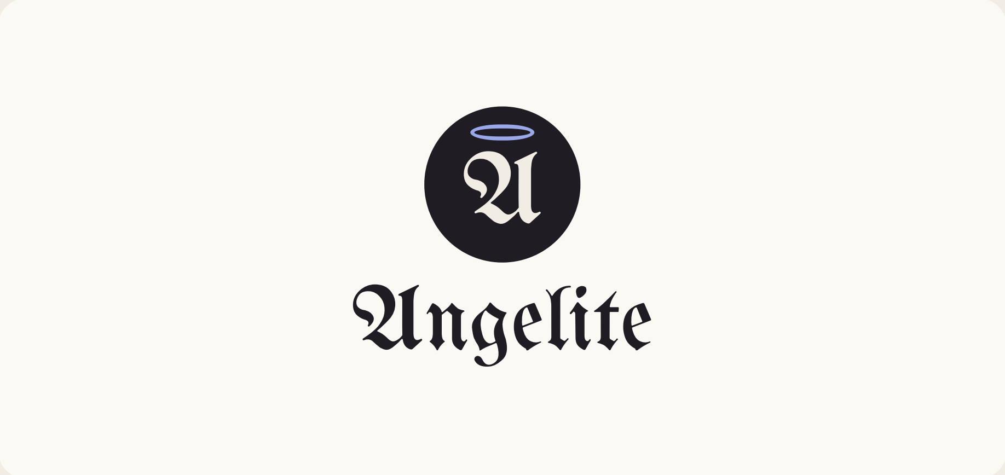
## Four lockups



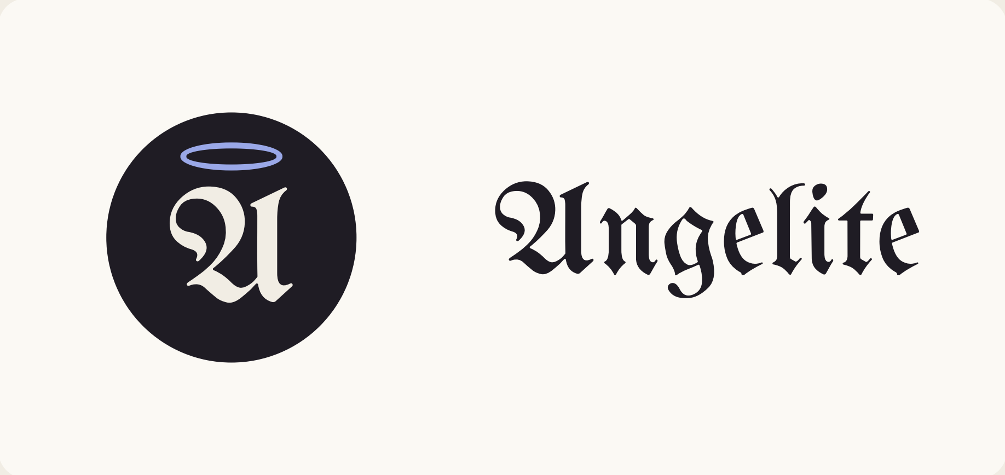
**Primary.** Default for site headers, docs, and README banners.



**Primary, dark.** For dark mode and Ink backgrounds. The seal inverts to Vellum.



**Stacked.** For square formats: stickers, slides, event badges.



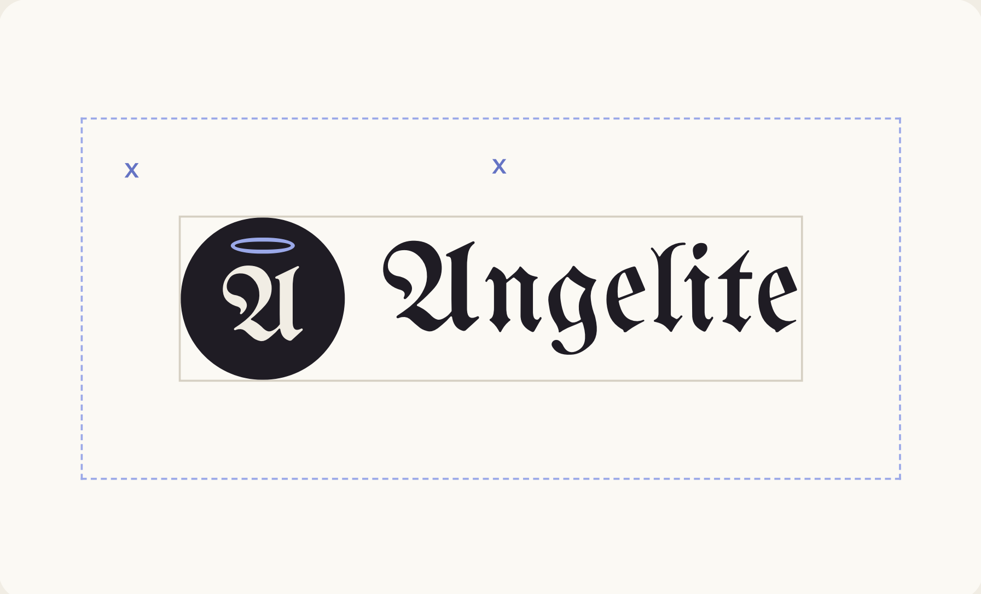
**Seal and wordmark.** Use separately only when the full name appears nearby.

03 · CLEAR SPACE & SIZE

## Give it room

Keep clear space equal to **x**, the width of the halo, on every side. Nothing else enters this area.

| | |
|---|---|
| Primary lockup, min width | **120 px · 30 mm** |
| Seal, min size | **24 px · 6 mm** |
| Below 24 px | **A without halo** |



04 · COLOR

## Ink, vellum, and one stone

| | | | |
|---|---|---|---|
| **Ink** | #1F1C24 · RGB 31 28 36 | Type, seal, dark grounds |
| **Vellum** | #F1EDE4 · RGB 241 237 228 | Page and light grounds |
| **Angelite** | #9AA8E8 · RGB 154 168 232 | Halo on Ink, highlights |
| **Deep Angelite** | #6574C4 · RGB 101 116 196 | Halo on Vellum, links |

Ink and Vellum carry about 90% of any layout. Angelite blue is reserved for the halo and small accents. In single-color print, the halo takes the same color as the seal outline.

05 · TYPOGRAPHY

## One voice for display, two for reading

Aa

**UnifrakturMaguntia**

Wordmark and rare display moments, such as release names. Never for body text or below 32 px.

Aa

**IBM Plex Sans**

Headings, UI, and documentation. Weights 400, 500, 600.

Aa

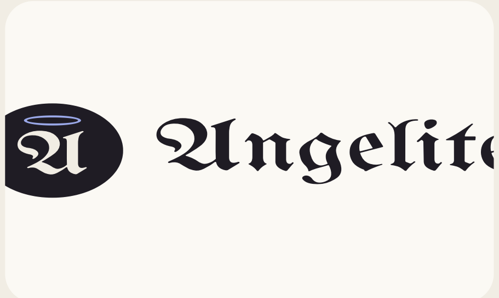
**IBM Plex Mono**

Code, CLI output, model names, and small labels.

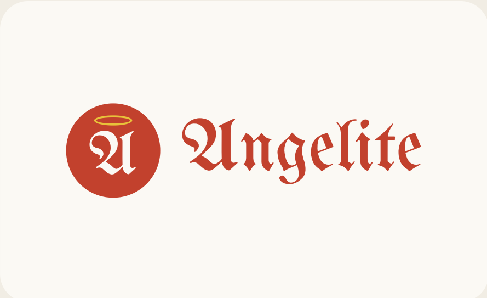
```
$ pip install angelite
>>> angelite.speak("Hello, world", voice="seraph-en")
```

06 · MISUSE

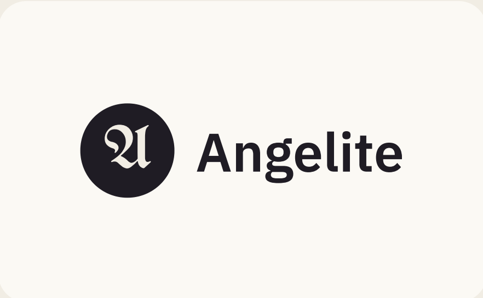
## Don't



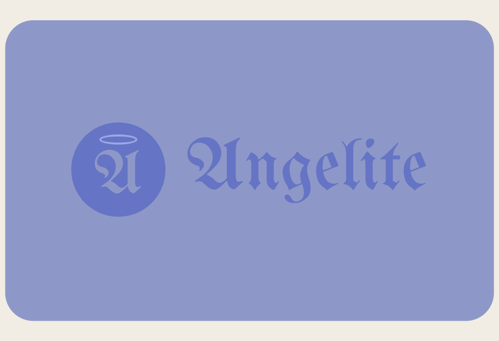
Stretch or distort it.



Recolor outside the palette.



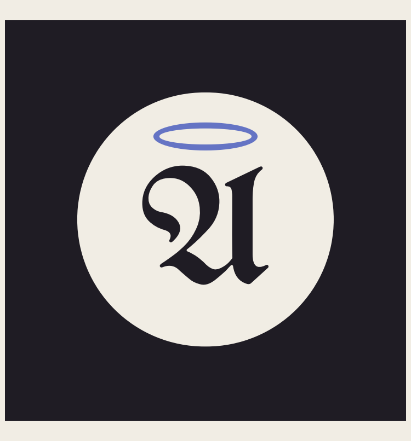
Remove the halo or reset the wordmark.



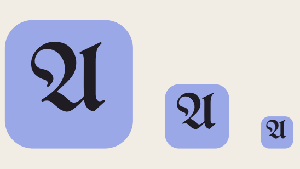
Place it on low-contrast grounds.

07 · APPLICATIONS

## GitHub, web, and social



GitHub org avatar · 800×800



Favicon / app icon · 256, 32, 16
